1. Introduction

SPUDZ is a community token built on the Igra Network and serves as the core asset of the SPUDVERSE ecosystem. The project combines original artwork, NFT collections, decentralized trading, NFT staking, and community participation into a single ecosystem centered around the SPUDZ token.

Unlike many meme tokens that launch with limited functionality, SPUDZ was designed to support an expanding ecosystem of original projects. Current components include the EvilSpud, SPUDSTARZ, and YonaSpud NFT collections, with additional collections planned for future release. Holders can trade SPUDZ through Kspa DeFi and participate in NFT staking through Lyceum Protocol.

SPUDVERSE emphasizes transparent development, public documentation, and long-term ecosystem growth. Information regarding tokenomics, contract details, supply, official resources, and project updates is made publicly available through the project's website and official social channels.

2. Fair Launch

SPUDZ was launched through the LFG Launchpad on the Igra Network using a fair launch model.

No presale, private sale, venture capital allocation, whitelist, or free team allocation took place before launch. Every participant, including the developer, acquired SPUDZ by purchasing it during the public launch using KAS.

The developer purchased approximately 1.7 billion SPUDZ for approximately 2,300 KAS during the public launch. Since launch, a significant portion of those tokens has been distributed through community rewards, giveaways, ecosystem incentives, and development initiatives. The developer currently holds approximately 2.9857% of the total supply.

The LFG Launchpad automatically locked the developer wallet for one month following launch. This lock applied to the developer's purchased allocation and provided additional transparency during the initial trading period.

SPUDZ continues to operate with publicly verifiable liquidity, contract information, token supply, burn address, and trading activity. All token movements can be independently verified on-chain.

Fair Launch Summary

Item	Details
Launch Platform	LFG Launchpad (Igra)
Launch Type	Fair Launch
Presale	None
Private Sale	None
Whitelist	None
Free Team Allocation	None
Developer Purchase	Approximately 2,300 KAS
Developer Wallet Lock	Automatically locked for 1 month by LFG
Liquidity	Public
Contract	Public
Burn Address	Public

3. Token Information

SPUDZ is an ERC-20 community token deployed on the Igra Network, an EVM-compatible Layer 2 built on top of the Kaspas BlockDAG. SPUDZ serves as the primary token of the SPUDVERSE ecosystem, supporting community participation, NFT-related initiatives, staking, liquidity, and ecosystem development.

The token contract, supply, holder distribution, transactions, liquidity, and market activity are publicly verifiable through the Igra Explorer, GeckoTerminal, and the project's official resources.

Token Details

Field	Value
Token Name	SPUDVERSE
Token Symbol	SPUDZ
Blockchain	Igra Network
Underlying Layer 1	Kaspa
Token Standard	ERC-20
Decimals	18
Contract Address	0x1516eA6260CC2070d6e716362E0ac593c784E865
Trading Pair	SPUDZ / WIKAS
Primary Decentralized Exchange	Kaspa DeFi

Verification

All contract information, token supply, holder distribution, liquidity, and market activity referenced in this litepaper are publicly verifiable through the official blockchain explorer and project resources. Users should always verify contract addresses and official links through the SPUDVERSE website before interacting with third-party services.

4. Tokenomics

SPUDZ was launched through the LFG Launchpad on the Igra Network using a public fair launch. There was no presale, private sale, whitelist, venture capital allocation, or free team allocation. Every token entered circulation through the public launch or subsequent market transactions.

The figures below reflect the token supply at the time this litepaper was published. Current on-chain values can always be verified through the official Igra Explorer.

Token Supply

Metric	Value
Maximum Supply	28,700,000,000 SPUDZ
Current Supply	25,246,017,392 SPUDZ
Permanently Burned	3,453,982,608 SPUDZ
Decimals	18

Distribution

Category	Allocation
Presale	None
Private Sale	None
Whitelist	None
Venture Capital Allocation	None
Free Team Allocation	None
Public Fair Launch	100%

Launch Information

Item	Details
Launch Platform	LFG Launchpad
Blockchain	Igra Network
Launch Method	Public Fair Launch
Developer Participation	Purchased approximately 2,300 KAS worth during public launch
Developer Wallet Lock	Automatically locked for one month by LFG

Supply Transparency

The SPUDZ token contract, supply, burn address, holder distribution, liquidity, and transaction history are publicly accessible and independently verifiable through the Igra Explorer and official project resources.

SPUDZ maintains a transparent supply model. All burns are permanent and publicly visible on-chain. No hidden allocations, unlock schedules, or undisclosed token distributions exist.

5. SPUDVERSE Ecosystem

SPUDVERSE is a community-driven ecosystem built around original artwork, NFT collections, decentralized finance, and community participation. SPUDZ serves as the ecosystem's ERC-20 community token, connecting the project's various components while supporting future expansion.

The ecosystem is designed to grow over time through additional NFT collections, staking opportunities, community initiatives, and utility built on the Igra Network.

Ecosystem Components

SPUDZ Token

The ERC-20 community token of the SPUDVERSE ecosystem, used to support community participation, liquidity, rewards, and future ecosystem features.

EvilSpud

A hand-drawn collection of 100 original horror-inspired potato parody NFTs created by NotShore.

SPUDSTARZ

A collection of 75 pixel-art movie-inspired potato parody NFTs featuring original interpretations of recognizable film characters.

YonaSpud

An Official Collaborative Collection of 45 hand-drawn potato parody NFTs created in partnership with the Platform Kaspacom's Official YonatoshiNFT community.

SNESpudz

An upcoming collection of hand-drawn potato parody NFTs inspired by classic video game characters from video gaming history.

NFT Staking

Supported through Lyceum Protocol, allowing eligible NFT collections to participate in staking functionality within the ecosystem.

Liquidity

SPUDZ is publicly tradable through Kasper DeFi, where users can buy, sell, and provide liquidity.

Development Philosophy

SPUDVERSE emphasizes original artwork, transparent development, fair launch principles, and long-term ecosystem growth. New features and collections are intended to expand the ecosystem while maintaining publicly verifiable project information and open community participation.

6. NFT Collections

The SPUDVERSE ecosystem includes a series of original NFT collections created by the project's founder. Each collection has its own theme while remaining connected through the broader SPUDVERSE ecosystem. The collections are independently tradable on the Kaspa NFT marketplace and are intended to support community engagement and future ecosystem functionality.

EvilSpud

Collection Size / Status	100 NFTs
Description	EvilSpud is a collection of hand-drawn horror-inspired potato parody characters. Each NFT is an original illustration created by the project's founder and features unique artwork rather than procedurally generated traits.
Marketplace	https://kaspa.com/nft/collections/EVILSPUD

SPUDSTARZ

Collection Size / Status	75 NFTs
Description	SPUDSTARZ is a collection of pixel-art potato parody characters inspired by classic movie icons. Each NFT is individually designed and contributes to the expanding SPUDVERSE universe.
Marketplace	https://kaspa.com/nft/collections/SPUDSTARZ

YonaSpud

Collection Size / Status	45 NFTs
Description	YonaSpud is a collaborative collection developed with the Yonatoshi community. Each NFT is hand-drawn and combines the SPUDVERSE art style with the Yonatoshi theme.
Marketplace	https://kaspa.com/nft/collections/YONASPUD

SNESpudz

Collection Size / Status	In Development
Description	SNESpudz is an upcoming collection featuring hand-drawn potato parody interpretations of classic video game characters. The collection is intended to expand the SPUDVERSE ecosystem while maintaining the project's original artistic style.
Marketplace	Coming Soon

Future Collections

Additional original NFT collections may be developed as the SPUDVERSE ecosystem expands. Future releases will follow the same principles of original artwork, transparent development, and community participation.

7. Utility

SPUDZ is designed to function as the primary community token of the SPUDVERSE ecosystem. Its purpose is to support ecosystem participation, NFT-related functionality, community initiatives, liquidity, and future utility developed within the project.

As the ecosystem expands, additional uses for SPUDZ may be introduced through future platform updates.

Current Utility

Community Rewards

SPUDZ is distributed through community reward programs, giveaways, and ecosystem initiatives.

NFT Ecosystem

SPUDZ supports the broader SPUDVERSE NFT ecosystem and its associated collections.

Liquidity

SPUDZ can be traded and paired with WiKAS through Kasper DeFi, allowing users to buy, sell, and provide liquidity.

Community Participation

SPUDZ serves as the primary community token across the SPUDVERSE ecosystem and its official platforms.

Planned Utility

- Expanded NFT utility.
- Additional staking opportunities.
- Ecosystem incentives.
- Community events and reward programs.
- Future integrations with SPUDVERSE applications and services.

The timing and implementation of future features will depend on ongoing development and community priorities.

Design Principles

- Fair Launch
- Transparency
- Original Artwork
- Long-Term Ecosystem Development

All future utility is intended to build upon these principles while maintaining open access and publicly verifiable project information.

8. NFT Staking

SPUDVERSE supports NFT staking through Lyceum Protocol, providing eligible NFT holders with an additional way to participate in the ecosystem. NFT staking is designed to expand the utility of SPUDVERSE collections while encouraging long-term community participation.

Supported Collections

- EvilSpud
- SPUDSTARZ
- YonaSpud

Support for additional collections may be added as the ecosystem expands.

Staking Platform

NFT staking is available through Lyceum Protocol.

Official staking portal

<https://lyceumprotocol.com/spudz-academy-/nft>

Purpose

NFT staking is intended to provide additional utility for eligible collections while supporting the long-term growth of the SPUDVERSE ecosystem. Participation requirements, supported collections, reward structures, and future updates are determined by the staking platform and official project announcements.

Transparency

Users should always verify they are interacting with the official Lyceum Protocol website through the links published on the SPUDVERSE website and official social channels.

9. Liquidity

SPUDZ is publicly tradable on the Igra Network through Kasper DeFi. Liquidity is provided through the SPUDZ/WIKAS trading pair, allowing users to buy, sell, and provide liquidity in a decentralized environment.

The liquidity pool is publicly accessible, and trading activity can be independently verified through both Kasper DeFi and GeckoTerminal.

Trading

Item	Details
Primary Trading Pair	SPUDZ / WIKAS
Primary Decentralized Exchange	Kasper DeFi
DEX URL	https://defi.kasper.com/swap/tokens/0x1516ea6260cc2070d6e716362e0ac593c784e865
GeckoTerminal	https://www.geckoterminal.com/igra/pools/0x0f9480fcb1b44143165f8c441cfbe3659e627487

Liquidity Providers

Community members may choose to provide liquidity to the SPUDZ/WIKAS pool through Kasper DeFi. Liquidity providers should understand the risks associated with providing liquidity, including impermanent loss, before participating.

Transparency

Liquidity, trading activity, and pool balances are publicly verifiable through the official decentralized exchange and blockchain explorer. Users should always verify they are interacting with the official SPUDZ contract before trading or providing liquidity.

10. Transparency

Transparency is a core principle of the SPUDVERSE ecosystem. Project information, token data, liquidity, and official resources are made publicly available so that community members can independently verify information through on-chain data and official project channels.

Fair Launch

- No presale
- No private sale
- No whitelist allocation
- No venture capital allocation
- No free team allocation

All participants, including the developer, acquired SPUDZ by purchasing tokens during the public launch.

Developer Participation

The developer purchased approximately 2,300 KAS worth of SPUDZ during the public launch. The LFG Launchpad automatically locked the developer's purchased allocation for one month following launch. Since launch, a significant portion of the developer's purchased tokens has been distributed through community rewards, giveaways, ecosystem initiatives, and project development.

Public Verification

- Token contract
- Holder distribution
- Token supply
- Burn address
- Liquidity pool
- Trading activity
- NFT collections
- Official staking platform

Commitment

The SPUDVERSE project is committed to maintaining publicly accessible documentation and providing accurate information regarding the ecosystem. Material updates, ecosystem changes, and official announcements are communicated through the project's official website and social media channels.

11. Project Goals

The SPUDVERSE ecosystem is intended to expand through continued development of its existing token, NFT collections, and community initiatives. The project's primary objective is to strengthen the ecosystem while maintaining transparency, fair launch principles, and original artwork. Development priorities may evolve over time based on community feedback, technical considerations, and ecosystem needs.

Current Priorities

Expand the SPUDVERSE Ecosystem

Continue developing new features and utilities around the existing SPUDZ token and NFT collections.

Grow the Community

Support long-term community participation through events, rewards, educational resources, and ecosystem initiatives.

Expand NFT Utility

Continue developing additional utility for SPUDVERSE NFT collections through staking and future ecosystem integrations.

Increase Ecosystem Adoption

Improve accessibility by expanding project documentation, educational resources, and awareness of the SPUDVERSE ecosystem.

Strengthen Liquidity

Support a healthy decentralized trading environment through continued liquidity participation on Kasper DeFi.

Maintain Transparency

Continue providing publicly accessible documentation, accurate project information, and on-chain verification of ecosystem data.

Long-Term Vision

SPUDVERSE is being developed as an ecosystem rather than a standalone token. The long-term vision is to continue building original NFT collections, community-driven initiatives, decentralized applications, and additional utility around the existing SPUDZ token while maintaining transparent development and fair launch principles.

12. About the Developer

Alxnder Gomez (NotShore)

Alxnder Gomez, known online as NotShore, is the founder and developer of the SPUDVERSE ecosystem.

He created the original SPUDVERSE concept, artwork, NFT collections, and the SPUDZ ecosystem. His work includes the EvilSpud, SPUDSTARZ, YonaSpud, and upcoming SNESpudz collections, along with the development of the SPUDZ token ecosystem on the Igra Network.

As project developer, he maintains the official website, project documentation, community resources, and ecosystem development while continuing to expand SPUDVERSE through original artwork, NFT utilities, staking initiatives, and community engagement.
